

Ceramic

WHEN SWISS PRECISION MEETS CERAMIC PERFECTION

The Candino Ceramic collection is a harmonious combination of Swiss precision, advanced materials and refined femininity. Created in Switzerland, these watches take contemporary watchmaking to a new level through the use of high-tech ceramic, offering both technical excellence and long-lasting aesthetic appeal.

The case and bracelet are crafted from high-tech ceramic, available in pure white or deep black, and provide exceptional scratch resistance thanks to their zirconium oxide-based composition. This material is considerably harder than stainless steel, helping the watch maintain an impeccable appearance even with everyday use.

Unlike coated metals, ceramic is coloured throughout the material, ensuring excellent colour stability. Whichever shade is chosen, it remains uniform and resistant to fading, chipping and colour changes over time.

Lightweight yet strong, ceramic provides comfort and ease on the wrist. Its hypoallergenic and chemically inert properties ensure excellent skin compatibility, while its low thermal conductivity makes it more pleasant to the touch than traditional metals.

Each model is protected by sapphire crystal and finished with polished steel indexes or sparkling zirconia markers, adding a subtle touch of light and elegance.

This is not simply a watch: it is an expression of contemporary luxury, where innovative materials combine with classic design to create the perfect balance of durability, comfort and style.

FEATURES

Case: ceramic
Thickness: 10.1 mm
Shape: round
Case diameter: 38 mm
Weight: 118 g
Crystal: sapphire

Bracelet: ceramic
Strap width: 18.95 mm
Clasp type: folding clasp

Movement: RONDA 505-6H201 quartz
Manufacture: Switzerland
Battery type: SR920SW

Functions: date
Water resistance: 5 ATM
