

FESTINA SWISS MADE AUTOMATIC DIVER

DIVER

SWISS MADE

SWISS QUALITY FOR AN INCREDIBLE DIVE IN STYLE

A technical watch with striking character, specially designed for professional use but also conceived to express its personality in daily life through an energetic and distinctive aesthetic approach.

Constantly driven by an audacious spirit aptly reflected in its exclusive features, **Festina** is now exploring the underwater world with a new product designed and tested to meet the most demanding requirements of those looking for a watch capable of withstanding the most challenging conditions without giving up on style or quality: the **Festina Swiss Made Automatic Diver collection**.

Designed pursuant to standard ISO 6425, the Automatic Diver from the Festina Swiss Made collection is a watch equipped with **30 ATM water resistance** (300 metres), a generous 47.30 mm case (14.50 mm thick) made of 316L polished steel, a unique type of low-carbon austenitic steel, which is known for its **high resistance to corrosion** and **low magnetic attraction**, both fundamental in any diving watch. The same material is also used for the **five-row strap**, the aesthetic arrangement of which features shiny satin links with a design that's anything but conventional.

Another characteristic feature of this model, which gifts it with a unique and unmistakable look, is the technical solution implemented for the **crown winder** and time setter, aligned at 2 o'clock and, above all, conveniently **preserved by a protective device** designed to prevent accidental blows and involuntary actions. The carefully selected off-centred positioning was also planned for good **ergonomics**. In other words, the guard element which could have interfered with wrist movement, especially in models with a considerable diameter was deliberately moved closer to the lug.

Another distinctive feature that makes the Festina Swiss Made Automatic Diver the perfect watch for underwater divers is **the one-directional rotating bezel** with a sexagesimal scale, which is quite useful for **calculating dive times**. With a markedly knurled perimeter, this technical component is perfect for facilitating its use even with gloves. It's finished with a ceramic disc featuring a **luminescent triangular dial**. **Ceramic** is essentially non-scratch material meaning it's particularly appropriate for exposed elements such as the bezel, which can be subject to impacts.

On the inside, the Automatic Diver is equipped with a **Soprod Newton** automatic winding movement, a Swiss Made mechanism proven to have 44 hours of power reserve, as well as a quick-correction semi-instant calendar feature, all internally produced at the factory which has been a part of Festina Group since 2008. Recognised for its precision and reliability by **COSC certification**, this next-generation calibre decorated with a Côtes de Genève finish is equipped with a balance wheel that can move up to 28,800 A/h as well as a blue oscillating body, both visible at the back through an aperture in the **sapphire crystal**.

Miguel Rodríguez, Owner and Founder of the Festina Group, is particularly proud of this FESTINA Automatic Diver, COSC Chronometer, as it is the perfect example of the Group's accumulated experience and know-how.

In accordance with the style and chromatic trends of the times, the all-new Swiss Made Automatic Diver by Festina is available in **six different models**, all with a variety of sphere colours: black, blue, turquoise, yellow, orange and green. The colours are repeated on an additional perforated rubber strap with a buckle to match the colour of the sphere. It's a sporty alternative to the steel strap with an extendable clasp so the watch can be comfortably worn even over a neoprene wetsuit. Festina Swiss Made Automatic Diver comes in a **special box** which includes the **additional rubber strap** and a special tool to quickly switch it.

FESTINA GROUP

With more than 40 years of history, at present Festina Group is a prestigious international company that specialises in the production and commercialisation of precision mechanisms and pieces for well-known watch brands. Nowadays, the Group commercialises six watch brands on the traditional market (Calypso, Lotus, Festina, Jaguar, Candino and Kronaby), one brand for the Perrelet luxury division and two jewellery brands (Lotus Style and Lotus Silver). The group's headquarters is in Spain while its major production centres are located in Switzerland. The Group has currently got seven subsidiaries (France, Germany, Italy, Benelux, Switzerland, Czech Republic/Poland and Chile), is present in more than 90 countries on the 5 continents and sells 5 million watches each year. Its product quality, excellent know-how and special attention to after-sale services have helped Festina Group become the leader in many strategic markets.
