

Innovation with character

Jaguar is proud to unveil this new ceramic collection, distinguished by its luminous, vibrant colours. This striking effect is the result of an advanced fusion of materials science, ultra-precise machining, and expertly crafted surface finishing.

The woman's Swiss Jaguar Ceramic J1050, J1051 and J1052 represents a forward-looking approach to Swiss watchmaking, where technical precision meets a bold, contemporary design. Created for those who appreciate innovation and strong identity in every detail, this timepiece stands out for its confident presence and refined aesthetics, making it suitable for both formal occasions and modern everyday wear.

Technical quality

Powered by a Swiss-made M705 quartz movement, this collection delivers precise, reliable performance. Crafted from zirconium oxide

(ZrO₂) ceramic and stainless steel, the components undergo precision shaping, high-temperature sintering, and diamond-tipped machining, producing cases, bezels, and bracelet links with micron-level accuracy. The surfaces are finished through diamond polishing, brushing, or bead-blasting, creating a choice of glossy or matte textures.

Lightweight, hypoallergenic, and virtually scratch-proof, the ceramic bezel retains its deep, lasting colour over time. Completed with a black stainless steel bracelet and folding clasp, the watch offers water resistance up to 5 ATM, combining elegance, durability, and modern sophistication.

Be more Jaguar

Since 1938, Jaguar has upheld the tradition of high-precision Swiss watchmaking, blending timeless design with advanced technology to ensure reliability and performance.
