

## Jaguar Automatic Diver

Jaguar presents an innovative new model for the brand: the new Automatic Diver. This sporty and functional watch is the perfect accessory for those always on the move. Thanks to its automatic movement, this time-piece needs no battery and is charged through the user's own movement.

The J886 model made of 316L stainless steel and equipped with a Swiss movement, features a 43.50mm diameter case, sapphire glass and a rotating bezel. In addition, thanks to the screw crown, the watch has a water resistance of up to 200m (20 BAR), making it the ideal accessory for lovers of water sports.

For those who prefer a more original look, the J887 model combines the shine of stainless steel with the gold IP treatment on the crown, bezel and bracelet.

J886/4
